

SELECT within SELECT Tutorial

Language: **English** · 日本語 · 中文

This tutorial looks at how we can use SELECT statements within SELECT statements to perform more complex queries.

name	continent	area	population	gdp
Afghanistan	Asia	652230	25500100	20343000000
Albania	Europe	28748	2831741	12960000000
Algeria	Africa	2381741	37100000	188681000000
Andorra	Europe	468	78115	3712000000
Angola	Africa	1246700	20609294	100990000000
...				

Using nested SELECT

Summary

Contents

Bigger than Russia

Richer than UK

Neighbours of Argentina and Australia

Between Canada and Poland

Percentages of Germany

Bigger than every country in Europe

Largest in each continent

First country of each continent (alphabetically)

Difficult Questions That Utilize Techniques Not Covered In Prior Sections

Three time bigger

Bigger than Russia

1.

List each country name where the population is larger than that of 'Russia'.

```
world(name, continent, area, population, gdp)
```

```
SELECT name
FROM world
WHERE population >
  (SELECT population
   FROM world
   WHERE name = 'Russia')
```

[Submit SQL](#)[restore default](#)

Correct answer

name
Bangladesh
Brazil
China
India
Indonesia
Nigeria
Pakistan
United States

sqlzoo select in select 1

Exercises

1.

List each country name where the population is larger than that of 'Russia'.

```
world(name, continent, area, population, gdp)
```

Load video

```
SELECT name
FROM world
WHERE population > (
  SELECT population FROM world WHERE name = 'Russia' )
```

YouTube SQL

Restore default

Correct answer

name
Bangladesh
Brazil
China
India
Indonesia
Nigeria
Pakistan
United States

Richer than UK

2.

Show the countries in Europe with a per capita GDP greater than 'United Kingdom'.

Per Capita GDP

```
SELECT name
FROM world
WHERE continent = 'Europe'
  AND (gdp / population) > (SELECT (gdp / population) FROM world WHERE name =
'United Kingdom');
```

Submit SQL

restore default

Correct answer

name
Austria
Belgium
Denmark

Finland	
Germany	
Iceland	
Liechtenstein	
Luxembourg	
Monaco	

sqlzoo select in select 2

Neighbours of Argentina and Australia

3. 😊

List the name and continent of countries in the continents containing either Argentina or Australia. Order by name of the country.

```
SELECT name, continent
FROM world
WHERE continent = (SELECT continent FROM world WHERE name = 'Argentina')
OR continent = (SELECT continent FROM world WHERE name = 'Australia')
ORDER BY name;
```

[Submit SQL](#)[restore default](#)

Correct answer

name	continent
Argentina	South America
Australia	Insular Oceania
Bolivia	South America
Brazil	South America
Chile	South America
Colombia	South America
Ecuador	South America
Federated States of Micronesia	Insular Oceania
Fiji	Insular Oceania

Between Canada and Poland

4.

Which country has a population that is more than United Kingdom but less than Germany? Show the name and the population.

```
SELECT name, population
FROM world
WHERE population > (SELECT population FROM world WHERE name = 'United Kingdom')
AND population < (SELECT population FROM world WHERE name = 'Germany');
```

[Submit SQL](#)[restore default](#)

Correct answer

name	population
France	68128000
Thailand	68263022

Percentages of Germany

5. 

Germany (population 80 million) has the largest population of the countries in Europe. Austria (population 8.5 million) has 11% of the population of Germany.

Show the name and the population of each country in Europe. Show the population as a percentage of the population of Germany.

The format should be *Name, Percentage* for example:

name	percentage
------	------------

Albania	3%
Andorra	0%
Austria	11%
...	...

Decimal places

Percent symbol %

```
SELECT name, CONCAT(ROUND(((population / (SELECT population FROM world WHERE name =  
'Germany')) * 100)), '%')  
FROM world  
WHERE continent = 'Europe';
```

Submit SQL

restore default

Correct answer

name	CONCAT(ROUND(..
Albania	3%
Andorra	0%
Austria	11%
Belarus	11%
Belgium	14%
Bosnia and Herzegovina	4%
Bulgaria	8%
Croatia	5%
Czech Republic	13%

sqlzoo select in select 5

5.

Germany (population 80 million) has the largest population of the countries in Europe. Austria (population 8.5 million) has 11% of the population of Germany.

Show the name and the population of each country in Europe. Show the population as a percentage of the population of Germany.

Decimal places

Percent symbol %

```
SELECT name,
       (100*population/(SELECT population
                        FROM world
                        WHERE name='Germany'))
FROM world
WHERE continent='Europe'
```

Submit SQL

Restore default

YouTube

Wrong answer. Some of the data is incorrect.

name	100*populatio..
Albania	3.4962
Andorra	0.0943
Austria	10.5368
Belarus	11.7288
Belgium	13.8741
Bosnia and Herzegovina	4.6975
Bulgaria	8.9768
Croatia	8.9768

Load video

To get a well rounded view of the important features of SQL you should move on to the next tutorial concerning aggregates.

To gain an absurdly detailed view of one insignificant feature of the language, read on.

We can use the word ALL to allow >= or > or < or <= to act over a list. For example, you can find the largest country in the world, by population with this query:

```
SELECT name
FROM world
WHERE population >= ALL(SELECT population
                        FROM world
                        WHERE population>0)
```

You need the condition **population>0** in the sub-query as some countries have **null** for population.

Bigger than every country in Europe

6. 😊

Which countries have a GDP greater than every country in Europe? [Give the name only.] (Some countries may have NULL gdp values)

```
SELECT name
FROM world
WHERE gdp > (SELECT MAX(gdp) FROM world WHERE continent = 'Europe' AND gdp IS NOT NULL)
AND continent <> 'Europe';
```

[Submit SQL](#)[restore default](#)

Correct answer

name
China
Japan
United States

We can refer to values in the outer SELECT within the inner SELECT. We can name the tables so that we can tell the difference between the inner and outer versions.

Largest in each continent

7. 

Find the largest country (by area) in each continent, show the continent, the name and the area:

The above example is known as a **correlated** or **synchronized** sub-query.

Using correlated subqueries

```
SELECT continent, name, area
FROM world x
WHERE area >= ALL
      (SELECT MAX(area)
       FROM world y
       WHERE y.continent = x.continent)
```

[Submit SQL](#)[restore default](#)

Correct answer

continent	name	area
Africa	Algeria	2381741
Insular Oceania	Australia	7633565
South America	Brazil	8460415
Asia	China	9326410
Europe	Russia	16378410
North America	United States	9147593

First country of each continent (alphabetically)

8.

List each continent and the name of the country that comes first alphabetically.

```
SELECT continent, name  
FROM world  
WHERE name LIKE 'A%'  
GROUP BY continent  
ORDER BY name;
```

[Submit SQL](#)[restore default](#)

Correct answer

continent	name
Asia	Afghanistan
Europe	Albania
Africa	Algeria
North America	Antigua and Barbuda
South America	Argentina
Insular Oceania	Australia

Difficult Questions That Utilize Techniques Not Covered In Prior Sections

9. 

Find the continents where all countries have a population ≤ 25000000 . Then find the names of the countries associated with these continents. Show name, continent and population.

```
SELECT w1.name, w1.continent, population
FROM world w1
WHERE 25000000 >= ALL(SELECT w2.population FROM world w2 WHERE w2.continent =
w1.continent);
```

Submit SQL

restore default

El Salvador	North America	664888
Equatorial Guinea	Africa	1558160
Eritrea	Africa	3748902
Estonia	Europe	1365884
Eswatini	Africa	1223362
Federated States of Micronesia	Insular Oceania	105754
Fiji	Insular Oceania	893468
Finland	Europe	5547549
Gabon	Africa	2233272
Georgia	Asia	3736400
Greece	Europe	10482487
Grenada	North America	112579
Results truncated. Only the first 50 rows have been shown.		

[Show what the answer should be...](#)

Three time bigger

10. 😊

Some countries have populations more than three times that of all of their neighbours (in the same continent). Give the countries and continents.

```
SELECT w1.name, w1.continent
FROM world w1
WHERE w1.population > ALL
      (SELECT (w2.population * 3) population FROM world w2 WHERE w2.continent =
w1.continent AND w2.name <> w1.name)
```

[Submit SQL](#)[restore default](#)

Correct answer

name	continent
Brazil	South America
